

DevOps & Cloud Computi ng

WITH IRONHACK

This is

Ironhac

k

Welcome, aspiring
Ironhacker! We're
happy to see you here.

Before we dive into your
new Program, let us tell you
a little about who we are
and what we do.

→ We help career
changers launch their new

tech career.

How do we
do that?

training in highly

sought-after

skills

1 We offer

Our deep understanding of the
market means we know exactly

which skills tech companies are
looking for, and our alumni walk

away with the in-demand skills that'll
help them get a job.

2 We offer life-changing career guidance

We set students on a career path that'll bring them job satisfaction and lead to the role of their dreams.

3 We're our students' partners, not just a tech school

We're partners for our students beyond graduation, helping

them figure out the messy middle of
job-hunting.

Why

Study

in

2026?

Study DevOps & Cloud

Computing in 2026:

→ → → → The global DevOps

market is expected at US

\$12.54 billion in 2024, rising to

US \$15.06 billion in 2025

(CAGR $\approx$ 20.1%), and reaching

US \$38.11 billion by 2029 —

[Business Research Company].

Alternatively, another report

forecasts growth from US \$13.2

billion in 2024 to US \$81.1

billion by 2033 (CAGR $\approx$ 19.95%) — [IMARC Group]
AI-powered DevOps tools, including anomaly detection, automated remediation, and platform engineering, are increasingly reducing downtime and enhancing developer productivity and system stability — [Baytech Consulting]

Baytech Consulting
Global cloud computing spending is estimated to hit US \$1.3 trillion by 2026, up from

enterprise IT spend of US \$1.3 trillion shifting to the cloud, growing toward US \$1.8 trillion by 2026 — [Wikipedia summary of IDC & McKinsey data]

Wikipedia

In 2026, nearly 50% of workloads run in the public cloud, and 72% of IT leaders prioritize cloud optimization for cost savings, performance, and security — [TechRadar Pro]

By the end of the program, you will be able to:

→ → → → → → Master the DevOps mindset, including its principles and best practices for collaboration.

Apply Agile methodologies effectively, focusing on the Scrum framework.

Understand the roles, events,

and artefacts associated with Scrum.

Gain foundational knowledge in Cloud Computing using platforms like Amazon AWS or Microsoft Azure, encompassing system administration, networking, Virtual Machines, and the core concepts of Cloud Computing. Design and analyze distributed systems, leveraging cloud architecture patterns,

developing serverless applications, and evaluating cloud system monitoring and auto-scaling tools.

Develop expertise in cloud security, focusing on identity management, secure configurations, and compliance with regulations like GDPR.

What are the job

Collaboration, Version Control & Coding

NOTE: These are just some of the tools you'll get hands-on with in the course — think of them as examples, not the full list. We'll keep things fresh and adapt to the best tools available.

Course

Overvi

ew

“Learn by doing” is the
best way to describe
Ironhack’s educational

methodology. We aim to translate our learning experiences into real-life experiences. One way we deliver this idea is through creating learning activities and projects that require on-the-job skills. Furthermore, we challenge students to be problem-solvers,

collaborators, and
initiators. Ironhackers
leave bootcamps
experienced. Period.

Bootcamp

Career Hack

What this Course is About

Building the backbone of
modern technology This

course teaches you how to design, deploy, and maintain the infrastructure that keeps today's applications running smoothly in the cloud and at scale.

Mastering DevOps and Cloud fundamentals You'll learn how cloud systems work from the inside out setting up servers, automating deployments, and managing scalable

environments using AWS, Linux, and Terraform.

Automating workflows and improving reliability You'll explore how CI/CD pipelines, containerization, and monitoring tools make development faster, safer, and more efficient.

Learning through real-world

simulations Hands-on labs
and projects mirror real
industry challenges from
setting up secure
infrastructure to deploying
applications across multiple
environments.

Becoming a DevOps-minded
engineer By the end, you'll
understand how development
and operations teams
collaborate to deliver robust,

scalable, and secure systems
the foundation of every
modern tech company.

What you will Build in this Course

Cloud Infrastructure Labs

Configure and deploy
cloud environments using
AWS and Infrastructure as

Code (IaC) Automation & CI/CD
Projects
with Terraform.

Create Continuous
Integration and
Deployment pipelines that
automate

Containerization & Orchestration
builds, tests, and releases.

Implement secure access
management and
understand cloud

governance best practices.

Package and deploy applications using Docker and orchestration tools for Security & Compliance Module scalability.

Monitoring & Optimization Labs

Design and deploy a complete, production-ready cloud infrastructure, from architecture to automation, showcasing your skills as a

Cloud & DevOps Engineer.
Set up monitoring and alert
systems, analyze metrics,
Capstone Project
and improve performance.
Prework

40+ hours

You will be introduced to
Ironhack's online platform,

where you will have access to all bootcamp materials starting from prework, covering the basic DevOps concepts. Topics include:

Linux & Scripting

Networks

Git Culture of DevOps and DevOps

Introduction

Cloud systems (comparison)
bootcamp

360+ TOTAL

HOURS

Here you will start your learning journey with your fellow classmates. Utilising cohort-based learning, you'll cover the following topics and skills:

DevOps & Agile Methodologies
Introduction to DevOps,

Collaboration & Communication
in DevOps, Agile Mindset &
Principles.

Scrum Framework Essentials.

Cloud Computing Foundations

Basic Concepts of Cloud
Computing, Cloud Networking
& Virtualization: Basic Concepts
of Cloud Networking and Virtual
Machines and Databases,
Command-Line Proficiency.

Platform-Specific Skills: Amazon AWS
and Microsoft Azure.

Docker Containers &
Management

Containers Fundamentals,
Docker Setup & Configuration,
Image Creation &
Management, Networking &
Volume Management.

Docker Compose & Orchestration

Container Management & Kubernetes

Kubernetes Fundamentals,
Container Technologies &
Operations, Advanced
Container Features
(Persistence, Ingress and
Auto-scaling), Monitoring,
Security, & Orchestration
Platforms.
bootcamp

Continuous Integration (CI) & Continuous Deployment (CD) Essentials

Introduction to CI/CD, CI/CD
Pipeline Configuration &

Management, Testing & Monitoring in CI/CD.

Version Management & Incident Handling.

Infrastructure as Code (IaC)

Introduction to Infrastructure as Code (IaC), IaC Tools & Technologies, Design & Implementation in the Cloud, Best Practices & Self-Provisioning.

Distributed Systems Design Principles

Foundations of Distributed Systems Design, Cloud Architecture & Serverless Applications, Monitoring & Auto- Scaling in Cloud Environments.

Performance Optimization & Cloud Economics.

Career-development
Communication Critical
Thinking Professionalism
Team-work

*Disclaimer: Course topics are subject to change according to the demands of the job market. We aim to design our curriculum to meet the required skills for junior positions in the tech market.

Students who do not complete the activities and final project do not earn a certificate.

Assessment & Evaluation

To keep you engaged and on track, we'll perform a mix of formative and

summative assessments
daily. The basic
components are:

Class activities and checks
for understanding These
are small interactions to
check that everybody is
moving together,
understanding the
concepts, and staying

engaged.

Labs help consolidate the knowledge and review core concepts that you've learned during that day (or evening). They are designed to help you learn by assessment. You will receive regular class feedback from labs.

Projects are a core part of the learning journey, letting you show off your new skills and are designed to be engaging, emulate real-world scenarios, and worthy of your portfolio. By the end of the bootcamp, you will be able to include these group and individual

projects in your portfolio as experience.

Assessment & Evaluation

In addition, we provide you with the tools to help self-evaluate your work

and peer evaluate those of others. This will allow you to add another skill, self- efficacy, which is key to developing professional autonomy throughout your career trajectory.

👉 Throughout the bootcamp, you will complete hands-on activities that will allow you to gradually grow your skills. Most importantly, you'll feel yourself progress, gaining a better understanding of

your strengths and areas
where you can improve,
which will allow you and
the teaching team to
make the best plan to
achieve your goals:
whether that is landing a
job in the tech industry or
further developing your
skill set.

Service

s

We don't just help you find a role, we help you build a skill for life.

You'll develop the mindset, tools, and confidence to navigate every career change that comes your way. Not just

your next role, but the
ones after that too.

Together, we'll turn job
searching into a skillset
and career growth into a
lifelong habit.

Your Career Journey:
Powered by You,
Guided by Us
At Ironhack, you'll never

job-hunt alone.

Our Career Advisors are here to guide you through every stage from building your portfolio and refining your pitch to preparing for interviews and networking with confidence. We believe in empowerment: we'll show you the path, and you'll take the steps. That's why our new

Career Services Levels
help you move forward
with purpose unlocking
new resources as you
grow:

Create your job search toolkit: build your plan, start tracking your applications, and join mock interviews to boost your

confidence.

Learn how to negotiate salary, showcase your projects, and keep leveraging up through mentorship and

recurring sessions.**LEVEL 0 -
EXPLORER**Start with the
essentials: update your profile,
meet your Career Advisor, attend
Career Talks, and set your strategy
for success.

Level 1- Builder

Level 2- Innovator Refine your approach:

get personalized 1:1 sessions, strengthen your network, and start practicing for real interviews.

Level 3- Expert

Talent Accelerator

Program: Get Hired Faster

Ready to ditch the
classroom and dive
into real world
experience?

Ironhack students can apply to the TAP program to launch their careers! Gain hands-on experience (20 hrs/week max) and apply your skills in a fast-paced environment of cutting-edge startups. Level up

your resume with a
real-world project and a
potential referral letter
from your startup mentor.

TAP is already 8 editions
strong! Over 200 participant.

→ Gain practical
experience, and build a
strong portfolio. →

Collaborate on REAL
projects and connect with

inspiring startups → Earn a referral letter to boost your resume and land your first job!
