

TATIANA TUDOR

JUNIOR DEVOPS ENGINEER

Tilburg, Netherlands | +31 6 8498 0751 | tatianatudor@icloud.com | github.com/Leorfy15 | linkedin.com/in/tatiana-t-3b13b73bb

PROFESSIONAL SUMMARY

Junior DevOps Engineer completing a 400-hour intensive DevOps Engineering Bootcamp, with hands-on experience building and troubleshooting cloud-native environments across Microsoft Azure and AWS. Experienced with Kubernetes, Docker, Terraform, CI/CD and observability through production-style projects on AKS and EKS. Brings progressive DHL operations experience — from warehouse and customs to transport planning and team leadership — including cross-functional process improvement and approximately 10% operational cost reduction leading a 7-person team.

TECHNICAL & SOFT SKILLS

Cloud	Microsoft Azure (AKS, ACR, VMs, Azure Files, networking, Entra ID/OIDC); AWS (EKS, EC2, VPC, IAM, S3, DynamoDB, Route 53, ECR, CloudFront, ALB)
Infrastructure as Code	Terraform
Containers & Kubernetes	Docker, Kubernetes, Helm, NGINX Ingress, Horizontal Pod Autoscaler, Metrics Server
CI/CD & Automation	GitHub Actions, Azure OIDC, Ansible, Bash, Python scripting & automation
Observability	Prometheus, Grafana, Loki, Grafana Alloy
Security	Trivy, Cowrie SSH/Telnet Honeypot, Kubernetes Secrets, TLS/SSL
Data & Tools	MongoDB, PostgreSQL, Redis, Git, GitHub, kubectl, Azure CLI, AWS CLI, Linux
Soft Skills	Operational ownership Root-cause problem solving Cross-functional communication Team leadership & coaching

DEVOPS PROJECTS

Restauranty — Azure AKS DevOps Platform | Ironhack Final Project

- Solved inconsistent multi-service deployment by containerizing four core application services with Docker and deploying them to Azure Kubernetes Service (AKS) through Azure Container Registry and Kubernetes, creating a repeatable production-style cloud environment.
- Removed manual release and credential-handling risk by implementing GitHub Actions, passwordless Azure OIDC, NGINX Ingress, DNS and TLS/HTTPS, enabling repeatable secure deployments and externally accessible services without storing long-lived cloud credentials.
- Addressed limited operational and security visibility by centralizing metrics and logs for 6+ components with Prometheus, Grafana, Loki/Grafana Alloy and Cowrie, then exposing security summaries (auto-generated every 60 minutes) through an AI-assisted API — reducing investigation from multiple kubectl/log searches to a single operational view.
- Tackled container risk and runtime instability with Trivy, kubectl and Linux troubleshooting, surfacing 50+ HIGH/CRITICAL image findings and resolving networking, authentication, MongoDB and resource-management incidents to create a prioritized remediation backlog and improve platform stability.

Cloud-Native Voting Application on AWS EKS

- Solved orchestration of a five-component voting application by containerizing vote, result, worker, PostgreSQL and Redis with Docker and deploying them on Amazon EKS with Kubernetes, producing a working end-to-end microservices environment.
- Replaced error-prone manual AWS provisioning with Terraform for VPC networking, EC2, S3 and DynamoDB remote-state locking, making the infrastructure version-controlled, reproducible and safer to rebuild.
- Addressed secure access, scaling and observability with NGINX Ingress, Route 53, cert-manager, HPA, Prometheus, Grafana and Node Exporter, delivering HTTPS access and real-time visibility across a 2-node cluster with 28 pods and 32 running containers.
- Resolved deployment failures caused by DNS, TLS, networking and CPU resource-request issues using kubectl, Linux tooling and Kubernetes diagnostics, restoring workloads and strengthening cluster reliability through root-cause fixes.

PROFESSIONAL EXPERIENCE

Supervisor / Team Leader | DHL Freight Netherlands

2022 – Present

- Reduced operational costs by approximately 10% by redesigning planning and resource allocation across a 52-truck fleet, improving efficiency while maintaining service continuity for international transport operations.
- Lead a seven-person team and coordinate cross-border fleet operations across the Netherlands and Germany, using KPI ownership, service-level management and escalation handling to keep time-critical customer commitments on track.

- Improved cross-department execution by coordinating process changes and new-customer implementations with multiple DHL teams and stakeholders, creating clearer handoffs and helping new workflows move into stable daily operations.
- Closed planning-visibility gaps by introducing a dummy-order tracking approach and improving shared planning processes, giving teams clearer visibility of capacity and workload and enabling faster exception handling.
- Restructured team workflows and responsibilities and coached colleagues through root-cause problem solving, strengthening ownership, consistency and continuity when operational disruptions occurred.
- Earned an Employee of the Year nomination in recognition of operational performance, continuous-improvement contributions and impact beyond day-to-day team responsibilities.

Earlier DHL career progression

- Planner | DHL Freight Netherlands (~1 year, prior to 2022) — Planned daily international transport for the same Germany-focused operation, balancing fleet capacity, customer requirements and disruptions; built the operational knowledge that supported progression into the Supervisor role.
- Customs Operations – ASML Account | DHL Supply Chain (~4 years) — Handled time-critical customs processes for the ASML account, coordinating documentation and cross-functional stakeholders to keep import/export flows compliant under tight deadlines.
- Warehouse Operations | DHL Supply Chain (8 months) — Supported inbound, outbound and inventory activities, building hands-on understanding of end-to-end operational flow and frontline execution.

EDUCATION & DEVELOPMENT

DevOps Engineering Bootcamp | Ironhack

400 hours | Completed: September 2026

- Intensive learning-by-doing program built around hands-on labs, individual challenges and collaborative projects with other students, emphasizing practical problem solving and peer feedback.
- Core topics: Linux, Git, Python, Docker, Kubernetes, Terraform, AWS, Microsoft Azure, CI/CD, networking, observability and Infrastructure as Code.

Chemical Engineering | University POLITEHNICA of Bucharest, Romania

- Completed 4 years of coursework, developing a strong foundation in analytical thinking, technical problem solving and structured scientific work.

CERTIFICATIONS & ADDITIONAL INFORMATION

Certifications: Lean Green Belt | AWS Cloud Practitioner

Languages: Romanian – Native | English – Fluent | Dutch – A2
